COLLEGE OF ENGINEERING AND COMPUTER SCIENCE

REQUIREMENTS FOR A BACHELOR'S DEGREE

First Bachelor's Degree

Refer to the current WSU Undergraduate Catalog for University requirements to obtain a Bachelor's degree.

In addition, students must complete one of the approved programs of study established by the departments within the College.

Second Bachelor's Degree

Refer to the current WSU Undergraduate Catalog for University requirements to obtain a second Bachelor's degree.

In addition, students must satisfactory complete the requirements for the first bachelor's degree. NOTE: If two bachelor's degrees are pursued concurrently at Wright State, the students must declare one to be the first degree and the other to be the second degree for the purpose of applying the criteria contained herein.

Students must complete an approved program of study for the second bachelor's degree.

Included in the program of study for the second degree is a minimum of 45 hours which are unique to the second degree and not counted, in any sense, toward the requirements for the first degree. If this requirement is not automatically met by the additional program requirements for the second degree, then compensatory electives, approved by the major advisor, shall be added to meet the minimum 45 hours which are unique to the second degree.

Requirements Common to both the First Bachelor's Degree and the Second Bachelor's Degree

Students will be allowed to complete their program of study using either the program guide in effect at the time they are admitted to a program major in the College or any subsequent version of the program guide. Students who change majors after being admitted to a program in the College may be required to follow the program guide for the new major in effect at the time of transfer. Changes to a student's program of study may be required by the College to comply with state and ABET requirements in the event the program guide has undergone substantial change over the period of a student's enrollment. However, to the extent possible, such changes should be made without the addition of credit hours required for graduation. If a required course is no longer available, the department may require an appropriate course substitution.

Graduation from a program in the College requires fulfillment of all requirements of that program plus a minimum 2.0 GPA in:

a. All course work taken at WSU.
b. All engineering and computer science courses taken at WSU. For the engineering physics degree these courses include those required courses offered by the Department of Physics. If a course has been taken more than once, only the last grade will be used to compute the College GPA.
